

Expressions - Photography workshop

'Expressing architecture through photography' - Photography competition. Photography is a tool which cannot be separated from architecture. In the field of architecture, photography plays a crucial role in portrayal of a built environment in a holistic manner and even its quintessential in spatial understanding and analysis.

The response from all the students was overwhelming in terms of the efforts they put in choosing the subjects for their photos and the compositions which they captured. The main intention behind this exercise was to get a collective participation of the first and the third year; shortlist the best works amidst all the students and thereby they would be part of the national level (R.S.E.P.) Related Study Exchange Program.

It was also part of our efforts to restart the campus life for students after relaxations of covid normas. Students participated enthusiastically along with maintaining the best covid appropriate behavior possible.
